

BICYCLE TIRES

2024/2025

 **CST**
TIRES

1

Level 1 (0.7mm): A layer of rubber is added between the tread portion and the carcass ply to increase puncture protection and serve as a wear indicator.

2

Level 2 (1.5mm): FI: A layer of rubber is added between the tread portion and the carcass ply. The anti-stab rubber is a strengthened combination of high-strength rubber and high-strength chemical fibres.

3

Level 3: Lightweight and cut-resistant mesh interwoven fabric allows tires to provide good puncture resistance without adding excessive weight, reducing the risk of punctures.

4

Level 4: The same as Defender Cobweb, with additional bead to bead protection.

5

Level 5 (3mm): A 3.0mm thick elastic layer comprising special high-resilience rubber. When encountering puncture, the foreign body is discharged to avoid further puncture damage.

6

Level 6 (3mm): The double combined protective layer, which combines the advantages of Defender Rebound3 and Defender Cobweb, and greatly improves the puncture resistance of the tire.

7

Level 7 (5mm): A 5.0mm thick elastic layer comprising special high-resilience rubber. When encountering puncture, the foreign body is discharged to avoid further puncture damage.

2 **Anti-Puncture Levels**

4 **E-Moped/Fat Tire**

Fun and practical – tires for the newest trend in cycling.

10 **City/Commuter**

Bicycle tires for the daily routine.

20 **Road**

Road tires for leisure, training or serious competition – CST has it all.

28 **Gravel/Dirt**

Built to handle the everchanging conditions.

34 **Mountain**

Hardpack, loose or dirt – CST has the right tread patterns.

52 **BMX**

Tires for the track, street or park.

56 **Inner Tubes**

Standard, superlight, downhill, self-sealing or thorn resistant tubes.

CEB-01 SCOUT

Tailored for e-moped, the CST Scout is a high performance tire with a compound pattern for road and cyclocross. The wide grounding pattern can provide excellent grip and stability when on the road, while the transvers and longitudinal knobs can have great acceleration and braking performance together with cyclocross traction in harsh conditions. The tailor-made turn-up structure and FI fiber anti-puncture protection in the casing make your cycling more comfortable and safe. Special rubber is used on the tread to make a great balance between grasp and rolling resistance.

CEB-02 CST TOURANCE

Tailored for e-moped, the CST Tourance is a high performance tire for road and cyclocross. Wide knob groups with a sharp shape provide a large grounding area and increase durability and comfort, while continuous closed sipes and alternate high and low knobs moderately reduce rigidity, improving slip resistance for comfortable rides and grip for cyclocross. The gradient cutting pattern on the tread shoulder increases the edge effect for different heights, providing excellent grip on uneven roads. The tailor-made turn-up structure and FI fiber anti-puncture protection in the casing make cycling more comfortable and safe.

C1919 E-SERIES PRO

The most simple version of CST tires is so well made that they can be assembled on an e-bike up to 25 km/hour. However, there are increasingly more bicycles with pedal assistance that can go faster than 25 km/hour and for those bicycles the tires have to be specially approved. With the arrival of the CST E-series Pro, CST has set a new standard for e-bike tires. The carcass is extremely robust and the compound is specially made to generate less rolling resistance. Add to that the fast pattern and double breaker layer and this can justifiably be called a top-class product.

C1838 BREAKER

In 2012, the Breaker was given a makeover. And to be honest, the result is impressive. The new tread is a delight to see. This is the tyre for people who cycle every day and hate getting a puncture. Thanks to the anti-puncture layer, the tyre lasts even longer and is less likely to go flat. The revamped Breaker is a worthy successor to one of the best-selling urban tyres on the market.

CITY / COMMUTER

C1839 SENSAMO MASTER

Getting a puncture with Master tires is virtually impossible. This is because the Sensamo Master has a double anti-puncture system. Two anti-puncture layers, so twice as much protection! This hyper-modern form of anti-puncture protection does not diminish the tire's flexibility. It still gives a very comfortable ride. This, combined with the minimal risk of getting a puncture, makes every bike ride a pleasant and carefree one.

MACH FORMULA G5 PRO

CRD-06

Introducing the Mach Formula G5 Pro, a superior addition to our high-performance racing tire collection. This model elevates your race with its ultra-lightweight Defender Cobweb layer for unmatched puncture protection and a premium 120 TPI carcass that offers unparalleled flexibility and durability. Specifically engineered for speed and agility, the Mach Formula G5 Pro is crafted to keep you ahead, seamlessly combining robust strength and exceptional responsiveness. Embrace the challenge of the race track with confidence and experience the peak of racing tire technology. Step up to the Mach Formula G5 Pro and leave the competition trailing behind.

CIRCUIT

C3008

The Circuit is a lightweight and high performance road tire. This feature packed tire will help get you from A to B faster. The slick centre tread keeps things rolling quickly while the progressive shoulder tread provides a connected feeling in the corners. The supple casing reduces rolling resistance and smooths the road for a comfortable ride. Lightweight construction eases acceleration, allowing you to accelerate even faster. A high performance construction features a dual compound for improved cornering grip and even lower rolling resistance.

CORRERE

C1691

The CST Correre is a full-featured road bike tire suitable for training and racing. The dual-compound rubber offers improved tread wear plus increased traction and control while cornering. The folding bead version of the Correre features a 120 TPI casing and Defender Cobweb puncture protection to provide excellent ride quality and durability. The Correre is the answer for any rider who wants an upgraded road experience.

C1922 CITO

Lighter, more flexible and stronger than the competition. That was the order and that's what CST's engineers delivered. The Cito can compete with the best racing tires in the market. The carcass consists of 170 TPI, so these tires are flexible and strong. Available in various colors and, of course, in addition to the familiar 23-622 size, also available in wider sizes 25-622 and 28-622. With the Cito, CST introduces a top-class product to the racing segment.

C1761 CONQUISTAIRE

The CST Conquistare is designed to do one thing – conquer all road conditions. This road tire features a slick center designed to lower rolling resistance and provide consistent wear. The shoulders use a file-patterned design to maximise cornering ability. Select the folding bead option with Defender Cobweb and Nylon Cap puncture protection for a highly-durable road bicycle training tire.

C1808 RECOURSE

The Recourse from CST is an excellent choice for road riders who want a larger volume tire for training or competition. The folding bead version of the Recourse uses a 120 TPI casing to reduce weight and improve ride quality. A layer of our Defender Cobweb puncture protection is incorporated into the casing to help prevent flats.

GRAVELSPORT

NEW

CRD-03 **OVERTON SP**

Introducing the Overton SP, a lightweight gravel tire engineered for both speed and comfort. Building on the strengths of the original Overton, the Overton SP features a smooth centre section with knurling at the mid-point for enhanced control and responsiveness. Pronounced side knobs allow you to confidently navigate tight turns on varied gravel paths. Equipped with our Defender Cobweb puncture protection, this tire ensures a reliable and comfortable ride, perfect for gravel enthusiasts who value performance without the extra weight.

C3015 **DETOUR**

Take the long way home! The Detour is a fast-rolling, high volume, and lightweight commuter tire that provides traction in a variety of urban terrain. The Detour features a fast rolling centre tread with features that aide wet traction to make sure you stay upright on those rainy commutes. Shoulder knobs provide traction when leaned in grass and dirt, but they stay out of the way to keep you rolling fast in a straight line. CST's protection layer Defender Cobweb prevents punctures in the tread area, keeping you riding trouble free. The Detour's reflective sidewall stripes help visibility, so other road users see you night and day!

C3017 CONVOY

Grab your friends and get out there with the Convoy. This tread pattern has been engineered for the new generation of versatile all-road and gravel bikes. The tread is optimised for each of the multiple widths offered, allowing you to run as much tire volume as your frame allows. Even knob spacing gives you a consistent and connected feel that will keep you rubber side down whether you're in midwestern chunk gravel or small particle kitty litter. A supple casing provides all day comfort and excellent rolling speed. CST's Defender Cobweb protection under the tread will prevent punctures from slowing you down.

C1894 PIKA

The CST Pika is a dirt road tire built to handle the ever-changing conditions encountered during your daily commute or a weekend gravel grind. The tire has ramped centre knobs for a smooth, fast ride, while the shoulder tread features U-shaped knobs designed to give you confidence in the turns. The CST Pika comes in 700x38c and is equipped with dual compound tread, Defender Cobweb protection and wire bead.

CMT-06 MUDLOCK

CST developed a new tire especially for the most difficult circumstances; Mudlock. This tire is equipped with square-featured knobs that provide the maximum amount of grip. In addition, we use the softest compound to further optimise your ride. The position of the knobs ensures that mud does not stick on the tire. We are proud to mention that the Mudlock has been used by several riders during the Olympics of 2021.

C1747N JACK RABBIT II

An update from the current Jack Rabbit. The goal was to make an already great tire, even better. A special 'over-lay' bridge has been added to the pattern to ensure fantastic control and adds unparalleled grip and speed. This combination makes the Jack Rabbit II a true high performer.

C1807 OUSTER

The CST Ouster is designed to tackle technical all-mountain trails. The tall, open centre tread keeps the mud on the ground and off your tires, and grips roots and rocks while climbing. The aggressive side knobs dig into loose soil and give you the confidence to rail your bicycle through the turns. The Ouster is available with a wire or folding bead in 26" and 29" sizes. Folding bead versions also feature dual-compound rubber and Defender Cobweb puncture protection.

C1768 HEATHEN

The CST Heathen is an excellent choice for aggressive riding in hardpack to loose conditions. The centre of the tire features low, widely-spaced knobs to aid in debris shedding. The shoulder knobs have a tall profile to really dig in when the bicycle is leaned over. The Heathen is available in wire or folding bead versions. The folding bead version features a dual-compound tread for improved grip, and our Defender Cobweb puncture protection.

C1846 PATROL

The CST Patrol mountain bike tire features a versatile tread pattern suitable for a broad range of conditions. The medium-height centre knobs are ramped to reduce rolling resistance and are staggered to provide a consistent feel across the profile of the tire. The side knobs are fairly aggressive and provide excellent cornering grip. The Patrol is available with a wire bead or folding bead with Defender Cobweb puncture protection.

C1747 JACK RABBIT

The Jack Rabbit from CST is a UST-certified mountain bike tire, meaning it can be run tubeless on an approved UST wheel. To keep you burning up the trail, the Jack Rabbit features a fast-rolling tread design with small ramped knobs. When the trail gets technical, our Defender Cobweb puncture protection will give you the confidence to concentrate on your line. The same great tread pattern and puncture protection is also available in a tube-type version for riders not using UST-certified wheels.

C1861P B-TRAIL

The CST B-Trail mountain bike tire is a versatile trail tire sure to make your jaw drop. The CST B-Trail's unique tread pattern features short, alternating knobs on the centre tread for exceptional traction and lightning-fast speed. The side knobs are taller and more aggressive to ensure confident, flawless transitions coming in and out of turns. The CST B-Trail is available in folding bead with CLXX technology (170 TPI), making it the lightest mountain bike tire in the CST line-up.

C1752 BFT

The CST BFT (Big Fat Tire) features meaty centre and side knobs combined with a high-volume casing to create the ultimate aggressive all-mountain/freeride tire. The BFT offers predictable cornering and excellent braking traction – just what you need when the trail gets dicey. The BFT is available with a wire or folding bead with Defender Cobweb puncture protection, perfect for longer travel bicycles.

C1879 GRIPPER

The CST Gripper is a well-rounded, versatile mountain bike tire suitable for use in a variety of conditions. The centre tread features ramped knobs that flow throughout the tire to help shed mud and debris while decreasing rolling resistance for a smooth, comfortable ride. The centre tread is perfectly paired with staggered shoulder knobs for exceptional turning capabilities. The CST Gripper is available with a wire or folding bead with Defender Cobweb puncture protection.

C1876 BEATER

Beat your competition with the CST Beater! The CST Beater is a flexible XC-style tire with an innovative tread pattern engineered for performance and comfort. The centre tread features ramped and angled knobs that help keep the tire rolling fast on the trail and provide a consistent feel across the profile of the tire. The side knobs complement the centre tread with sharp, angled knobs for exceptional cornering grip. The CST Beater is available with a wire bead or folding bead with Defender Cobweb puncture protection.

C1671 CAMBER

The CST Camber is a hardpack mountain bike tire designed to run in specific directions for the front and rear. In front, the Camber rolls fast, confidently grabbing corners even in the loose stuff. Reversed on the rear, the Camber gives you the same confidence in the corners, plus additional acceleration and climbing traction. The Camber is available with a wire bead, a folding bead with Defender Cobweb puncture protection and a UST-certified bead profile and casing.

BMX

C1854 VAULT

The Vault BMX tire from CST uses a tread pattern suitable for street, park and dirt riding. With a textured surface and slightly raised shoulder knobs, the Vault rolls fast without giving up traction. The Vault is available in two widths, 1.95 and 2.20, to suit any freestyle BMX rider's needs.

ITEM	INCH	ETRTO	TPI	BEAD	WEIGHT (g)	COMPOUND	MAX PSI	COLOUR	TECH
TB29484000	20X1.95	50-406	60	Wire	590	Dual	100	Black

C1853 DECADE

Named for the "old school" trick, the CST Decade was designed with flatland BMX riding in mind. The Decade features a smooth profile, with no knobs to interfere with your feet while performing tricks. The surface of the tire is textured to help grip the soles of your shoes. The Decade is available in 1.75 and 2.00 inch widths.

C1809 OPERATIVE

The CST Operative is equally suited for the track, street or park. The smooth centre tread helps you carry speed, while the micro knobs on the shoulders offer just the right amount of cornering grip. The tread design continues around the sidewall of the tire to give you a little extra insurance when grinding ledges. An excellent choice for your freestyle BMX bicycle.
